

# Finger Lakes Regional Emergency Medical Service Council, Inc.

**REMAC Advisory**

**22 - 01**

**Protocol Update**

6/7/2022

The Collaborative Protocols have been updated for the first time in several years. Please follow this link to review a narrated PowerPoint .

<https://youtu.be/BiiDCVs4r74>

These changes take affect immediately. Here are some notable changes that you should be aware of:

## Style and Appearance:

- There are no longer numbers for each protocol
- Language has been clarified and made consistent throughout
- Typeface and font have been made consistent
- A section has been added for Cardiac Emergencies

## Medical changes for consistency with AHA

- The lower limit of pulse oxygenation has been changed to 92%
- The dose of atropine has been changed from 0.5mg to 1mg

## Protocol additions and updates:

- Epistaxis
- Trauma associated shock (no applicable change in our Region yet)
- Nausea and Vomiting (addition of self-inhaled isopropyl alcohol wipe)

The updates should be available soon on the protocols apps, both the original app and the Muru platform. The pdf version is available on the NYS Bureau of EMS and Trauma Systems website

\*\*\* When you have completed the PowerPoint please log into the CNY system and complete an attestation for the 2022 update
